Responsive Web Apps

Activity 1.1P

Reflection on 1.1p Assessment Task

Being a new subject, it was quite a bit to wrap your head around to get everything up and running. As I have worked with HTML in the past it was enjoyable to go through a refresher to get everything set up with Vue3 and jump into a task such as this. I successfully achieved all the tasks requested and have included a screenshot below of some of the finished items. You will see the remainder in the screen capture recording, or by looking at the code.

I understood the workings of HTML and how it works with CSS in a variety of ways. The examples below provide an example of understanding each point on the task. It is not however intended to be a finished or presentable webpage for any other purpose.

A QUICK TASK USING CSS AND HTML (HEADING)

A QUICK TASK USING IMAGES (IMAGE)

This is the image!

Example of paragraph text

Column 1
Row 1, Cell 1
Row 2, Cell 1

Column 2
Row 1, Cell 2
Row 2, Cell 2

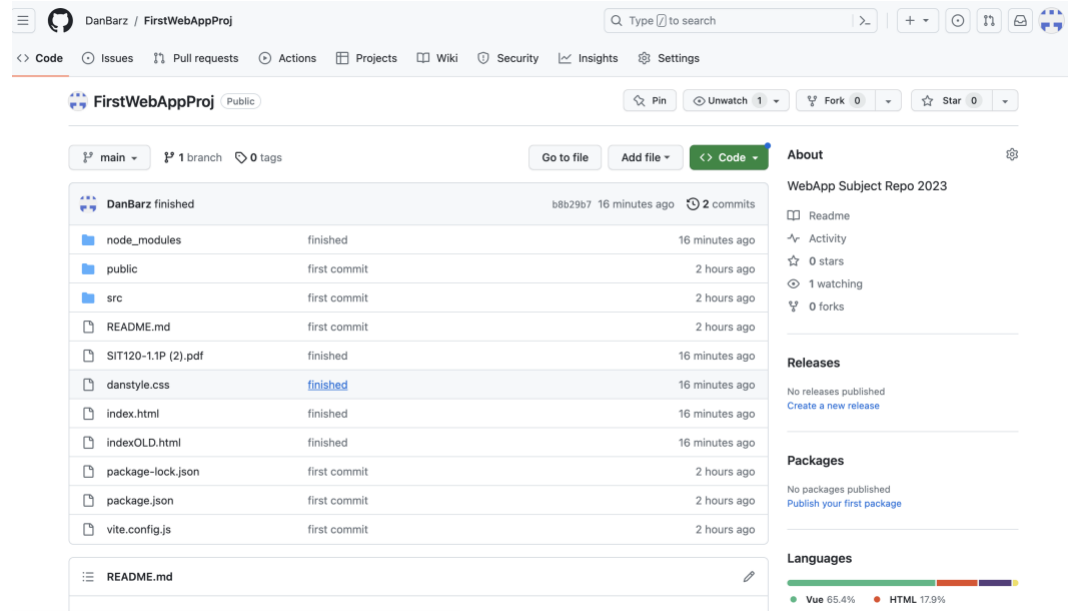

Column 3
Row 1, Cell 3
Row 2, Cell 3

Activity 1.1P

GitHub CLI and GitHub Repo Setup

The other interesting component was getting GitHub set up and running. It has been a little while since I used this tool, so the refresher was helpful on this front as well. I have it all setup and running successfully as indicated by the screenshot below.

The task touches on all the main items in our learning outcomes.
